

FARMMANAGER™

FARM MANAGEMENT FROM
YOUR PC

- Remote operation
- Clear overviews per house and per farm
- Easy data exchange

FARMMANAGER™ MANAGEMENT SOFTWARE

FarmManager™, is Fancom's PC management program. FarmManager gives you instant access, day and night, to all the Fancom control computers on your farm. View, control and analyse all the operational processes from behind the PC. And if necessary adjust the control computer settings to improve results even more. The result is a perfect overview of the entire farm, with no detail left to chance.

Features

- FarmManager automatically connects your Fancom control computers to your PC enabling remote read out and control of these control computers.
- FarmManager stores all data from the process computers and presents it in clear tables and graphs.
- Easily create your own overview screens, with additional PlusData™ management data not present in the process computer.
- The system automatically backs up all settings entered in your process computer.
- The system allows for the e-mailing of samples, calculated data and entry fields from all Fancom process computers in a convenient summary. The farmer himself chooses the information that is important to him and the frequency with which he wishes to receive the summaries

Advantages

- Remote operation saves time, lightens your daily workload and improves hygiene.
- Clear overviews, per house or of the whole farm, give insight into the ways to reduce production costs and improve the technical results.
- Timely identification of irregularities in animal development helps you steer towards healthy growth.
- Easy comparison of the various houses.
- Clear data enhances information exchange with business advisors, veterinarians and feed suppliers.
- Data can easily be exchanged with other Fancom management programs.
